

## Weapon Cart Product Specifications

Long Weapons carts are constructed of a welded 6061-T6 aluminum frame measuring 44 inches L x 24 inches W with height adjustment from 26 inches to 38 inches on 1 1/2 inch increments. The frame is fitted with 2- 3/8 inch thick x 48 inch gunstock supports made of High Density polyethylene (HDPE) with 15 gun positions per side for a total capacity of 30-rifles per cart. Gunstock supports have a 1" x 3/4" strip of HDPE in the base that supports the weapon stock and forces the weapon to lean against the barrel support to eliminate the weapons from tipping out of the cart during movement.

Barrel supports are of the same 3/8 inch HDPE and mounted to the top of the cart with 15 individual notches per side to support the barrels and hold them in place while moving. An optional one piece lock is available to secure all 30 weapons to the cart at one time with the use of one padlock. The cart frame has 2- locking swivel casters and 2- ridged casters with non-marking rubber wheels for smooth operation. The frame has large rubber bumpers on every corner and a 1 inch diameter large grip handle mounted on the top front of the frame for maneuvering the cart. Carts are available for MK19 and M2 as well.
